

Fully funded MRC studentships available for September 2022 entry in Interdisciplinary Biomedical Research.

The Warwick Doctoral Training Partnership recruits students to undertake cutting-edge, interdisciplinary research projects in one of the three areas that are important for the improvement of human health: Molecular Basis of Human Disease, Combating Infection, or Precision Diagnostics and Data Analytics.

We offer an excellent training environment, with an interdisciplinary MSc year followed by PhD research.

We are constantly working to create a supportive and inclusive environment to help students achieve their best potential, through promoting equality and challenging discrimination. We want our students to feel heard and valued for their hard work. We welcome and encourage applications from all students, especially those under-represented in academia.
